gpcom.com/business

Werner Enterprises is among the five largest truckload carriers in the United States, with coverage throughout North America, Asia, Europe, South America, Africa, and Australia. What started out as a one-truck operation has grown to be a \$2 billion company with more than 7,300 trucks, nearly 24,000 trailers, and more than 11,500 associates and independent contractors.

Werner Enterprises’s mission goes along with the tagline “We Keep America Moving”, moving retail store merchandise, consumer products, manufactured products, and grocery products around the world. In order for Werner to keep its data moving, it relies on broadband solutions from Great Plains Communications.

“Great Plains Communications provides dual routes of dark fiber from the Werner Enterprises corporate headquarters to its data center. This enables Werner Enterprises to scale its network whenever the company needs to increase bandwidth without incurring high bandwidth costs.”
