

CASE STUDY

Great Plains Communications was one of the early contracts we had in the 1623 Farnam facility. It's been a true partnership. Everyone on the Great Plains team is a great listener, and it's easy to work with them.

TODD CUSHING
PRESIDENT

gpcom.com/enterprise

Omaha, Nebraska is considered the data and connectivity sweet spot, given its central location's access to 50 network companies with local, regional, national, and international reach. That's why 1623 Farnam calls Omaha home.

For more than 20 years, 1623 Farnam has offered data solutions for fiber and wireless network providers, major cloud and content delivery network companies, content providers, and Fortune 500 enterprises. This premier interconnection facility supports mission-critical infrastructure and applications with the highest levels of availability, enabling maximum levels of application performance. It's host to seven of the Top 13 IP transit providers in the world and continues to attract new carriers.

For example, 1623 Farnam can meet the data traffic flow requirements for situations including these:

- » A content provider needing to deliver HD on-demand movies to subscribers nationwide
- » A developer building an IoT-capable application in the Google Cloud Platform
- » An enterprise wanting to lower long-distance network transit costs
- » A manufacturer looking to leverage IoT applications through secure, private connections to the cloud

Todd Cushing, President of 1623 Farnam, appreciates the partnership that's been built with Great Plains Communications. The two Omaha-based companies support each other's clients and help keep them at the forefront of technology.

Cushing said, "We trust Great Plains Communication to provide a good experience to our clients or anyone who asks us for a referral. We know Great Plains will take great care of their broadband needs."

“When we do cutovers for clients, there’s been no better migration than what we’ve had with Great Plains Communications. I’ll get an update from my team in the morning after we’ve worked all night, and they’ll report that the migration went like clockwork — an awesome, professional, and concise process with no time wasted.”

TODD CUSHING, PRESIDENT
1623 FARNAM

Cushing envisions a future for 1623 Farnam that includes an expanded relationship with Great Plains Communications.

He explained, “We’d like 1623 Farnam to become a real showplace, so Great Plains Communications could feel good about bringing their clients within our facilities and saying, ‘This is our presence and where you want to be to keep your company’s data safe.’ Our facility would encapsulate the experience that Great Plains has had with their server cage at 1623 Farnam.”

Great Plains Communications is very professional. So, when they implement a new solution or install something in our facility, we know it’s going to be right. There’s so much our team likes about working with the Great Plains team.
